

Stage 24: Magnitude and Place Value

Example 1:

$$10 \times 6.25 = 62.5$$

The numbers in the multiplicand and the product are the same because the multiplier is 10, and so it just changes the place value of each number.

Example 2:

$$504 \div 10 = 50.4$$

MY OWN:

Jaina is 140.6 cm tall.

How tall is she in meters?

$$140.6 \div 100 = 1.406 \text{ meters}$$
